International Conference on Corpus Linguistics and Technology Advancement 2015
語料庫語言學及語言科技發展國際會議

The CoLTA 2015 conference aims to bring together academics from around the world to report on their various corpus linguistics related research work, especially new technologies employed in the investigation into corpora in linguistics, language learning and translation studies. As more and more new technological tools have been developed in recent years for corpus linguistics research, and many Hong Kong tertiary institutions, including the HKIEd, are actively engaged in this research area, we hope that through the CoLTA 2015 conference we can promote Hong Kong as a hub for academic exchanges and collaborations in the area of technology-driven corpus for linguistics scholars around the world.

CoLTA

2015.12.16 - 18

Themes of papers

- Development of corpus analysis tools and applications
